DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Despite applicant's disagreement, the examiner decides to provide new rejection as below. Other references have been incorporated to strengthen the examiner's position with respect to the electrical ballast and dimming switch comprising a first board for holding a ballast circuit and a second board for holding power semiconductor devices and a switch responsive to one or more applied mechanical forces for turning lamps on and off and dimming the lamps.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by D'Aleo (U.S. Patent number 5,463,286).

Regarding claim 1, Lansing discloses an electrical ballast and dimming switch (Figs. 1 and 2) comprising a first board (10) for holding a ballast circuit and a second board (14) for holding power semiconductor devices and a switch (24, 34, 38) for turning lamps on and off and dimming the lamps (Figs. 1 and 2; col. 7, lines 1-65, col. 8, lines 1-65).

Allowable Subject Matter

4. Claims 1-11 and 13-14 are allowed.

None of the prior art teaches the circuit for dimming the lamp comprising first and second gate control circuits coupled respectively to the first and second voltage regulator and to the oscillator for generating gate control signals in accordance with the oscillator output, and first and second pairs of gate controlled power semiconductor devices connected to the gate control circuits for supplying power to fluorescent lighting devices in accordance with the gate control signals.
